That means there are still problems can occur although I have not seen it and I they have used them for a while.. The NVIDIA driver seems to be very weak to check this information reliably from the screen and trust additional information in xorg.. Therefore you should only use this PPA if you have experience in recovering the system from a system vendor upgrade failed.. Also holds my lshw -c screen saying that the system instead of nvidia runs Nouveau although I put Nouveau as a limited list Some idea.. Remember to restore the references after driver upgrades and submit performance we can share with everyone. [Motorola P2k Easy Tools 3.7](#)
